8 of 8 synthetic projects - Counts follow these filters

As at 9 Sep 2026, 10:00 am AEST

Portfolio at work

Eight projects across four stages.
Two blocked milestones, one overdue action and two unknown finish dates.

One consistent result

Search, coordinator, health and stage filters update the records and counts together. Returning preserves your search.

Start here

Open the HTML review and choose Open worked example. All changes reset on reload.

The detail page answers the useful questions

Identity, accountable coordinator, blocker, delivery outlook, next action and retained history.

The screenshot shows the 'Irrigation controls upgrade' project detail page in Powerplants One. The page is structured as follows:

- Header:** Breadcrumbs: Projects / r02 design review / Synthetic examples. Temporary changes reset on reload. Action buttons: Open worked example, Explore, J1 coordination (dropdown), Test state (dropdown), Normal (dropdown), Reset.
- Left Sidebar:** Navigation icons for My work, CRM, Estimating, Projects (active), and Service.
- Main Content Area:**
 - Project Info:** Demo Grower A / North propagation site. Coordinator: Alex · SYN-PPO-PRJ-000101. Status: Attention (Updated 9 Sep 2026, 09:30 AEST). Buttons: Open activity, Record update.
 - Blocker:** Shutdown confirmation is blocked. Sam owns the next step · 10 Sept 2026, 14:00 AEST. Button: Review blocker.
 - Overview Tab:**
 - Delivery outlook:** Target finish: 30 Oct 2026. Forecast finish: 6 Nov 2026. Change from target: +7 days (Calendar days). Note: Shutdown window unconfirmed; allow a later commissioning window.
 - Upcoming milestones:**
 - Shutdown confirmation (Blocked, Update) - Sam · 11 Sept 2026
 - Design coordination review (Planned, Update) - Taylor · 18 Sept 2026
 - Equipment readiness review (Planned, Update) - Alex · 16 Oct 2026
 - Scope context:** Internal note. Replace the irrigation controller; map six existing zones; verify control operation and provide operator familiarisation. Civil works and main power upgrades excluded. Existing valve reuse needs confirmation. Coordination context. Formal accepted scope is a later handover capability.
 - Next action:** Confirm shutdown window. SA Sam · 10 Sept 2026, 14:00 AEST. Button: Record outcome.
 - Latest update:** Forecast revised. 30 Oct 2026 → 6 Nov 2026. Shutdown window unconfirmed; allow a later commissioning window. Alex · 9 Sep 2026, 09:30 AEST. Button: View history.

What changed?

Record a reasoned forecast or stage update. Original context remains in history.

Who acts next?

The Activity owner can differ from the project coordinator. Completing an Activity does not resolve the milestone.

What is stopping work?

An owned blocker stays visible until it is explicitly reviewed and resolved.

The same journey on a phone

390 px and 320 px viewport captures. Content continues by scrolling; the bottom navigation stays available.

Designed for touch

Stacked cards, wrapping titles, explicit reference and update time, and labelled actions.

Less review clutter

Prototype-only controls collapse behind Review tools. They are separate from the product.

Clear save state

Changes say Updated in this preview. No durable save or offline sync is implied.

Structured scope without losing the source

A later-design view distinguishes included work, exclusions, assumptions and deliverables.

Accepted r03

The future fixture binds the six-zone scope to an exact synthetic quotation and response.

Proposed r04

Inspect the eight-zone change and its implications. There is no one-click replacement of accepted scope.

J1 remains focused

The initial implementation uses internal scope context. Formal scope and document review belong to a later increment.

Receive a handover deliberately

Review the source, scope and owned unknowns before creating or linking a project.

Source and delivery basis

Awaiting review

Irrigation controls upgrade

Demo Grower A · North propagation site

SYN-PPO-QUO-000101 · r03

Exact accepted synthetic quotation

Includes six zones and operator familiarisation.

Excludes civil works and power upgrades.

Shutdown window: Sam to confirm before installation planning.

Valve compatibility: Taylor to confirm.

Review source evidence

View scope

Receiving review

Coordinator Alex reviews scope, ownership and outstanding items before receiving.

Destination

Link existing · Irrigation controls upgrade

☒ I reviewed quotation r03 and its exact acceptance evidence.

☒ I reviewed inclusions and exclusions.

☒ The open items do not block project setup.

Sam owns shutdown confirmation; Taylor owns valve compatibility before installation planning.

Return for clarification

Receive handover

Three explicit checks

Review exact acceptance evidence, inclusions/exclusions and open-item treatment.

One destination

A repeat receipt returns the same preview destination. Linking keeps the existing project dates and coordinator.

Return with ownership

A return records clarification and a follow-up. A new source revision is needed before receiving again.

9 Sep 2026 · Synthetic interactive design · No application implementation

05

Review outcome and next build boundary

r02 refines the design. It does not invoke the Projects runtime or publish repository changes.

What you can exercise

- Create a known-site project with an initial owned Activity.
- Add a milestone; update progress and retain a correction.
- Record an Activity outcome, resolve the blocker, then reassess health.
- Inspect history and return to the original filtered register.
- Simulate an uncertain save, a conflicting update and unavailable content.
- Explore exact-document descriptions and future receiving review.

Verification and limits

45 browser design checks passed across 1366, 390 and 320 px. Browser: Chromium 152.0.7977.0. No uncaught page errors. Screens shown are actual prototype captures.

These checks cover the local HTML interaction model. They do not establish real permissions, database transactions, persistence, quotation acceptance or native-device acceptance.

Recommended next build: J1 register, milestones, owned Activities and update history. Future scope/documents/quotation handover remain separately bounded.

Source: BP-06/J1 and r01 review on main f8035b5c. The companion HTML is the primary review deliverable; full contracts and evidence accompany the prepared repository changes.
